### FILTRATION – ALL ROUND CLEAN AIR

Indoor air quality is important for people and for equipment. The right vacuum cleaner is essential to achieve this. The XP series comes as standard with a 3-stage filtration system of proven effectiveness.

### CERTIFIED FILTRATION QUALITY

The S-Class-Filtration system meets the demanding requirements of asthma and allergy sufferers, because fine dust particles are firmly retained inside the machine and not released into the air. Three filtering stages clean the air before it is exhausted.

(A) Stage one consists of the sealable 3-layer filter bag. This effectively retains bacteria, allergens and other potentially harmful substances for safe disposal.

(B) The second filter is the Micro Hygiene Filter made of electrostatic material. With a surface area of 497cm<sup>2</sup>, it captures even the finest particles down to 0.03 microns.

(C) The final stage is the Motor Filter, it ensures the exhaust air is clean and pure, it also protects the motor.
